

Across

2. Rapid Application Development.
5. A program that translates a complete high level language program into an independent machine code program.
8. The person or group that initiates the development process by specifying a problem.
10. A pen and paper exercise to debug a program.
11. A program is robust if it can cope with problems that come from outside and are not of its own making.
12. A system that responds to an external event such as mouse click or a key press.
14. An argument of a procedure or function that represents a local variable.
15. A detailed sequence of steps which, when followed, will accomplish a task.

Down

1. Independent machine code that can be run without translation.
2. A program is reliable if it runs well and is never brought to a halt by a design flaw.
3. A looping system where information is fed back in to a computer system.
4. A library includes code for standard algorithms that can be re-used by programmers.
5. Commercial Off The Shelf software.
6. An iterative process is one that incorporates feedback and involves an element of repetition.
7. The person responsible for analysing and determining whether a task is suitable for pursuit using a computer.
9. The detection, location and removal of errors in a program.
13. Data that is used to test whether software works properly and that it is reliable and robust.
